My future learning strategy

by Julia Woźniak 1 a

My goals:

I'd like to be good at biology and chemistry. I like these subjects, but although I study a lot I can't remember anything. I also want to have a scholarship, but it is impossible, I know that.

My strengths:

I'm good at learning English. It's my favourite language and I love studying it. Maybe it's because I'm not the worst at it. I used to be good at Maths but now I'm not. I'd like to change that.

My weaknesses:

My biggest weakness is reading. I usually read a story on the Internet and it takes time. I don't usually look at the watch, so my homework waits for me for a long time. When I stop reading it's usually the evening.

My action plan:

I will try to spend less time on reading and do my homework early during the day. I will also change my daily schedule for the better. I must study and be more interested in my future. I must change my strategy.
